In considering this, will the following be relevant.

1. The amount of toxic materials contaminating the site which will need to be removed. This would be by considerable lorry movements using the local road network to the detriment of residents. The scale of this remains to be determined.
2. The intended Relief Road, using the farm land next to the existing public footpath on the line of the former rail track, will physically divide the Parish into 2 separate parts which is unacceptable. The cost will be prohibitive.

Would there be justification for TATE to be sieved out?
