

So:- LDF PUBLICATION DRAFT CONSULTATION.

I would like to write to show support, not for the development i.e. HG2-10/1221 (or indeed any of the other proposed sites within this area) but immense support for the group set up to oppose these proposals. Without them a very large part of the community wouldn't even have been aware of the proposals being perpetrated beneath their very noses!

All of the points raised have got to be realized & endorsed as being correct to such as myself & many, many others.

When we decided to reside here some 10 years ago it was because of the more rural situation & not the more urban one that we left behind in Leeds that attracted us. Green Belt in those days was so named for that very reason & still should be. This particular grading of land needs to be adhered to more rigidly as the urban spread continues to overtake our lives & communities.

Schools are full, doctors, dentists, surgeries & clinics overwhelmed & then of course the nightmare of congestion on our roads the list goes on! No consideration seems to be given to the impact caused to the local people by the planners & developers.

Apart from the infringement of the green belt land, the present infrastructure cannot possibly support & sustain any further development in this area.

I totally agree with the need for affordable accommodation but the majority of properties already constructed & the ones up for proposal do not meet that criteria.

Good heavens!! This area is heading towards complete grid lock if its not addressed more responsibly. Councils need to get into our world & recognize the difference between GREEN & BROWN!!
